Title:	An Electromagnetism Metaheuristic for the Uncapacitated Multiple Allocation Hub Location Problem
Authors:	Filipović, Vladimir
Keywords:	Electromagnetism Metaheuristic Hub Location Combinatorial Optimization
Issue Date:	2011
Publisher:	Institute of Mathematics and Informatics Bulgarian Academy of Sciences
Citation:	Serdica Journal of Computing, Vol. 5, No 3, (2011), 261p-272p
Abstract:	In this article, the results achieved by applying an electromagnetism (EM) inspired metaheuristic to the uncapacitated multiple allocation hub location problem (UMAHLP) are discussed. An appropriate objective function which natively conform with the problem, 1-swap local search and scaling technique conduce to good overall performance.Computational tests demonstrate the reliability of this method, since the EM-inspired metaheuristic reaches all optimal/best known solutions for UMAHLP, except one, in a reasonable time.
